Know What to Expect When Managing Medical Equipment and Healthcare Technology in Your Organization As medical technology in clinical care becomes more complex, clinical professionals and support staff must know how to keep patients safe and equipment working in the clinical environment. Accessible to all healthcare professionals and managers, Medical Equipment Management presents an integrated approach to managing medical equipment in healthcare organizations. The book explains the underlying principles and requirements and raises awareness of what needs to be done and what questions to ask. It also provides practical advice and refers readers to appropriate legislation and guidelines. Starting from the medical equipment lifecycle, the book takes a risk-based approach to improving the way in which medical devices are acquired and managed in a clinical context. Drawing on their extensive managerial and teaching experiences, the authors explain how organizational structures and policies are set up, how funding is allocated, how people and equipment are supported, and what to do when things go wrong.

This book is intended to contribute to the ongoing discourse about Liberia or about Africa, which has often left people perplexed. According to a 2013 World Bank report, Africa has 30 percent of the world's minerals and proven oil reserves equivalent to 10 percent of global stock. How is it that Africa, which has such enormous mineral and oil wealth, is the poorest continent in the world? A similar question would suffice for Liberia, which became independent since 1847, has been a sovereign nation for over 170 years but is ranked as one of the poorest countries in the world. This is irrespective of the fact that the country is endowed with abundant natural resources. Accordingly, I herewith submit that Africa or Liberia is not poor but poorly managed, and that corruption is a major source of bad governance, widespread poverty and instability on the continent. There can be no question that corruption is like a cancer eating at the vitals of Africa, my beloved country Liberia being one of the worst affected on the continent. This is why this book is titled, Corruption is Destroying Africa: The Case of Liberia. Because of corruption, critical public services such as health and education have remained in a state of dysfunction.

Therapeutic Play Activities for Hospitalized Children Routledge

Art Therapy Practices for Resilient Youth highlights the paradigm shift to treating children and adolescents as "at-promise" rather than "at-risk." By utilizing a strength-based model that moves in opposition to pathology, this volume presents a client-allied modality wherein youth are given the opportunity to express emotions that can be difficult to convey using words. Working internationally with diverse groups of young people grappling with various forms of trauma, 30 contributing therapists share their processes, informed by current understandings of neurobiology, attachment theory, and developmental psychology. In addition to guiding principles and real-world examples, also included are practical directives, strategies, and applications. Together, this compilation highlights the promise of healing through the creative arts in the face of oppression.

Through the use of case examples and careful examination, this book presents the first interdisciplinary essay collection on the study of art crime, and its effect on all aspects of the art world. Contributors discuss art crime subcategories, including vandalism, iconoclasm, forgery, fraud, peace-time theft, war looting, archaeological looting, smuggling, submarine looting, and ransom. The contributors offer insightful analyses coupled with specific practical suggestions to implement in the future to prevent and address art crime. This work is of critical importance to anyone involved in the art world, its trade, study, and security. Art crime has received relatively little attention from those who study art to those who prosecute crimes. Indeed, the general public is not well-aware of the various forms of art crime and its impact on society at large, to say nothing of museums, history, and cultural affairs. And yet it involves a multi-billion dollar legitimate industry, with a conservatively-estimated \$6 billion annual criminal profit. Information about and analysis of art crime is critical to the wide variety of fields involved in the art trade and art preservation, from museums to academia, from auction houses to galleries, from insurance to art law, from policing to security. Since the Second World War, art crime has evolved from a relatively innocuous crime, into the third highest-grossing annual criminal trade worldwide, run primarily by organized crime syndicates, and therefore funding their other enterprises, from the drug and arms trades to terrorism. It is no longer merely the art that is at stake.

Medical and health tourism is a significant area of growth in the export of medical, health and tourism services. Although spas and improved well-being have long been part of the tourist experience, health tourism now includes travel for medical purposes ranging from cosmetic and dental surgery through to transplants and infertility treatment. Many countries including China,

Cuba, Hungary, India, Thailand, Malaysia and Singapore actively promote and compete for the medical tourist dollar, while many developed countries also provide niche private services. However, the field of medical tourism is increasingly being subject to scrutiny and debate, particularly as a result of concerns over regulatory, ethical and wider health issues. Drawing on a range of theoretical and methodological perspectives, this book is one of the first to critically address the substantial political, philosophical and ethical issues that arise out of the transnational practices of medical tourism. Through a series of chapters the book engages with key issues such as the role of regulatory and policy structures in influencing medical and health tourism related mobilities. These issues are investigated by considering range of developing and developed countries, medical systems and health economic perspectives. The book adopts a multi-layered perspective to not only investigate the business and marketing practices of medical and health tourism but places these within a broader framework of contemporary globalisation, policy and practice. By doing so it opens up debate of the ethical space in which medical and health tourism operates as well as reinforce the wide ranging perspectives that exist on the subject in both the public and academic imagination. This significant contribution will be of interest to students, academics in tourism and medical policy, trade and economic development fields.

This book is designed to help people who seek their first federal government job as well as federal employees who want to advance in the system. The process of getting a government job often involves preparing complex applications or specialized resumes which include the "resumix." One complication of the federal hiring process is that the resume used for federal employment is not the same as the resume used to obtain civilian employment. This book shows examples of effective federal resumes and "resumix" that have worked for real people. The book doesn't simply "tell how" to write the resumix or federal resume; it actually "shows how" to write effective federal resumes in sample after sample related to multiple fields. This book will do a great deal to make the federal hiring process understandable as it illuminates one of the most complex features of getting a government job: writing the federal resume or resumix. In addition to the federal resume, application for federal employment can be made by preparing the Optional Form 612 (OF 612). This book also contains examples of the 612 application.
