In *Organizational Behavior: Solutions for Management*, Paul Sweeney and Dean McFarlin have identified 4 key management skills areas that act as building blocks for successful behavior in management. These skills are: self-insight/perceptual skills; ability to inspire/motivate/lead; ability to analyze situations; and personal flexibility/adaptability. The authors also feel strongly that successful management of organizational behavior rests on the problem-solving process; in fact, the 4 skills listed above enable managers to use this process to deal with the "people problems" they face more effectively. If nothing else, studying what organizational behavior has to offer as a field should help a person figure out his/her strengths and weaknesses.

The design of an organization--the accountability system that defines roles, rights, and responsibilities throughout the firm--has a direct impact on the performance of every employee. Yet, few leaders devote focused attention to how this design is chosen, implemented, and adjusted over time. Robert Simons argues that by viewing design as a powerful and proactive management lever--rather than an inevitable outcome of corporate evolution--leaders can maximize productivity across every level of the organization. *Levers of Organization Design* presents a new design theory based on four key yet often underrated categories: customer definition, critical performance variables, creative tension, and commitment to mission. Building from these core areas, Simons lays out a step-by-step process leaders can follow to create structures and accountability systems that positively influence how people do their work, where they focus their attention, and how their activities can be aligned to contribute to overall strategic goals. He also introduces four levers of organizational design--unit configuration, diagnostic control systems, interactive networks, and responsibility to others--that leaders can manipulate to improve overall organizational efficiency and effectiveness vastly. For anyone accountable for measuring and managing performance, this book shows how good design can become an organization's roadmap to success. Robert Simons is the Charles M. Williams Professor of Business Administration in the accounting & control area at Harvard Business School.

This book explores what games and play can tell us about contemporary processes of urbanization and examines how the dynamics of gaming can help us understand the interurban competition that underpins the entrepreneurialism of the smart and creative city. *Games and Play in the Creative, Smart and Ecological City* is a collection of chapters written by an interdisciplinary group of scholars from game studies, media studies, play studies, architecture, landscape architecture and urban planning. It situates the historical evolution of play and games in the urban landscape and outlines the scope of the various ways games and play contribute to the city's economy, cultural life and environmental concerns. In connecting games and play more concretely to urban discourses and design strategies, this book urges scholars to consider their growing contribution to three overarching sets of discourses that dominate urban planning and policy today: the creative and cultural economies of cities; the smart and playable city; and ecological cities. This interdisciplinary work will be of great interest to students and scholars of game studies, play studies, landscape architecture (and allied design fields), urban geography, and art history.
